THE PROBLEM

The first step in the solution of a problem is to understand the problem. This involves reading the problem carefully and identifying the given information and the question to be answered. It is often helpful to draw a diagram or make a list of the given information. Once the problem is understood, the next step is to choose a strategy for solving it. This may involve using a formula, a theorem, or a logical argument. It is important to check the solution to make sure it is correct and that it answers the question.

There are many different strategies for solving problems, and it is important to practice them so that you can choose the right one for each problem. Some of the most common strategies are: drawing a diagram, making a list, using a formula, and using a logical argument. It is also important to check your solution to make sure it is correct and that it answers the question.

James O. Spencer, veteran. Promoted 1st sergeant. Taken prisoner July 30, 1864. Was reduced to the ranks while in prison without fault on his part. Released on parole.
